

## **925WR-P & 925WR-P/CL**

### **Phthalate-Free, Water Resistant Emulsion for Imprinted Sportswear and Other Textile Printing**

#### **PRODUCT DESCRIPTION**

**925WR-P** is a pale violet emulsion formulated for use with water-based textile inks. It has 41% solids content and a viscosity of 7000 centipoise (sensitized). It is identical to 925WR but uses a powder diazo and, thus, does not require hazardous labels or add-on shipping charges. **925WR-P/CL** is packaged with separate dye. It can be used undyed for easier see-through registration or with dye added according to the stencil maker's choice of color contrast for stencil inspection.

#### **Features-at-a-Glance**

- ▶ Utilizes diazo powder and does not require a hazardous shipping label
  - √ Requires no additional shipping costs
  - √ Economical
  
- ▶ Formulated for mechanical durability
  - √ Assures long printing runs, even with rough-surfaced fabric substrates
  
- ▶ Superb water resistance
  - √ Long runs with aqueous inks.
  - √ Can be used with heavy-alkali discharge inks
  
- ▶ Versatility
  - √ Resists plastisols and common textile washup solvents
  - √ Resists many co-solvent inks
  
- ▶ Clear version (925WR-P/CL) affords full range of color intensity
  - √ Can be used undyed for maximum registration-see-through
  - √ Range of dye can be added according to color preference for stencil inspection
