Hydros colour stripper will remove the colour from most fabrics. The amount of colour removed can vary depending on the dye base. When stripping protein fibres, such as silk or wool, there may be some damage to the fabric. We recommend where possible to therefore do a trial on a scrap of fabric before proceeding.

WE RECOMMEND: GLOVES, PROTECTIVE CLOTHING AND WORKING IN A WELL-VENTILATED AREA.

- Dissolve 8-10 teaspoons (40-50g) of HYDROS in 8-10 litres of hot water.
- Make sure it is completely dissolved and add fabric/garment.
- Stir regularly for an even result.
- After 10 mins add 1 teaspoon of dissolved SODA ASH
- Allow to sit for a further 5 minutes, continue stirring.
- Remove fabric/garment from stripping bath and wash well in warm soapy water.
- Process may be repeated to remove more colour.
